## **Summary**

Computer science student with a background in IT and software engineering looking to expand on my existing work experience whilst studying a bachelor's degree Computer Science at Lincoln University

## **Qualifications**

**GCSE grades A\* to C** – Maths, English and Science

**BTEC Level 3 Distinction** – Computing

**ABC Level 3 Award** – Web & Multimedia

## **Work Experience**

### **Seasonal Warehouse Assistant – John Greed, October to January 2018**

Over the Christmas season of 2018 I worked for John Greed Jewellers, based in Lincoln. My roles included collecting jewellery, dispatching it through their online system while confirming that customer data is handled correctly and packaging their orders to specifications provided by brands such as Pandora, Nomination, Thomas Sabo, Coeur De Lion and Swarovski to ensure their standards are upheld. This work helped me learn essential skills in working fast with a high degree of quality and attention to detail.

### **Sales Assistant – CeX Lincoln, May 2019 to March 2020**

While I have worked with customers in previous roles, I feel CeX is where my customer service skills have come in to their own. In my position at CeX I have learnt a lot about not only sales; learning skills such as product knowledge, upselling and demonstration skills, but also learning how to adapt to new situations and different customer needs.

### **BCM Consultant - DSV Global Transport and Logistics, February 2018 to May 2018**

My time working at DSV was spent working with and creating bespoke software robots to automate processes that otherwise would have required hundreds of hours of employee time to undertake. Whilst at DSV, I further realised my passion for problem solving and project work. This work helped me to develop a true resolve for investing time in tasks until they are complete to the highest possible quality.

## **About Me**

When I am not studying, I enjoy walking, going to the gym and learning about technology. I also enjoy playing the guitar, which I have been learning for two years. I hope to pursue a career in teaching Computer Science after graduating.
